

Camila Sabino

ABOUT ME

Software Engineer with experience building and evolving systems in high-growth environments.

I focus on designing product-oriented systems, addressing challenges related to architecture, scalability, and reliability in distributed environments.

I bring an end-to-end perspective to development, combining backend, frontend, and business understanding to build simple, robust, and maintainable solutions.

EXPERIENCE

Aug 2019 - Nov 2025

Software Engineer — Tiendanube

Worked on building solutions for a leading e-commerce platform in Latin America, within a distributed architecture across critical domains such as Payments, Promotions, and Account & Security.

- Designed and implemented the Payments API, enabling integration with 30+ external providers and improving the scalability of the payment system.
- Evolved native payment integrations into a decoupled architecture, enabling faster onboarding of new payment methods.
- Developed microservices in Scala (Akka, Play) with MongoDB to handle backend-to-backend payment flows within the Payments domain.
- Implemented a cross-platform Activity Logs system using Kafka and Elasticsearch, improving traceability and operational analysis across multiple services in high-volume environments.
- Developed a promotions microservice in Java (Spring Boot) to support discounts, coupons, and free shipping features.

Skills

- System Design
- Distributed Systems Architecture
- Domain Modeling (DDD)
- API Design
- Product-Oriented Development
- Testing & Code Quality
- Scalability & Performance

Tech Stack

- **Backend:** Java (Spring Boot), Scala, Node.js, PHP (Laravel)
- **Frontend:** JavaScript / TypeScript, React
- **Databases:** MySQL, MongoDB, Redis
- **Data & Messaging:** Kafka, Elasticsearch
- **Cloud & DevOps:** AWS, Docker

Languages

Spanish
Native

English
Advanced

Portuguese
Intermediate

Software Engineer — Tiendanube (cont.)

- Reduced reliance on external applications within the Promotions domain by implementing native functionalities directly in the platform.
- Implemented 2FA and improved authentication and session management within the Account & Security domain, strengthening access control and system security.
- Developed cross-stack features across multiple languages and frameworks, adapting to product needs.

Jul 2018 - Aug 2019

Full Stack Developer — UTN (Buenos Aires Regional Faculty)

Contributed to the development of an Academic Management System used by students, professors, and administrative staff.

- Migrated a legacy system to SIU Guaraní, adapting existing data and business processes.
- Developed full-stack features using PHP (Laravel), Twig, and JavaScript for self-service and management modules.
- Gathered requirements with end users and business stakeholders, aligning solutions with operational needs.
- Implemented business logic and optimized SQL queries, improving data access performance.

EDUCATION

2014 - 2018

Buenos Aires, Argentina

Information Systems Engineering

Universidad Tecnológica Nacional

2008 - 2013

Buenos Aires, Argentina

High School Diploma in Economics & Administration

EES N° 3 José Manuel Estrada
